PROFESSIONAL SUMMARY

Software Engineer with 3+ years building full-stack web platforms and cloud-native systems. Skilled in designing APIs and services, productionizing applications on cloud infrastructure, and automating delivery with CI/CD. Strong ownership across the lifecycle, focused on reliability, performance, and operational excellence.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, Bash

Frameworks & APIs: React, Next.js, Tailwind CSS, Node.js, Express, FastAPI, REST, OpenAPI, GraphQL, WebSockets

Data & Messaging: MongoDB, PostgreSQL, Redis, Neo4j, Kafka, Pub/Sub patterns, Snowflake

Cloud & Infrastructure: AWS (ECS/Fargate, Lambda, EC2, ALB, S3, RDS, CloudFront), Google Cloud, Firebase, Docker, Kubernetes, Nginx, Terraform, Ansible, Cloudflare Workers

Tooling: GitLab, Jenkins, Bitbucket, CI/CD, Git, Maven, JUnit, SonarQube, Linux, Jira, Prometheus, Grafana

WORK EXPERIENCE

Untitled

CO, USA

Full Stack Engineer, Platform

Dec 2025 - Present

- Migrated a legacy film platform (**Pug/Express + Knockout.js**) to a **Next.js (App Router)** media stack with **Mux** ingest/playback + **webhooks**, **Cloudinary** asset pipeline, and **MongoDB/Prisma** domain modeling, improving **Core Web Vitals** (LCP down 40%, CLS near-zero) and increasing average watch time by 68% (**Mux analytics**).
- Productionized the platform on **AWS** by containerizing the **Next.js** app and deploying on **ECS Fargate** behind an **ALB**, shipping via **CI/CD** with environment-scoped configuration, and implementing idempotent **Mux/Mailgun webhooks** with **DB-backed event-ID dedupe** for reliable media processing and notifications.

Rule4

CO, USA

Full-Stack Engineer, AI

Aug 2025 - Present

- Designed and implemented an AI assisted ticket creation feature for Rule4's TFOX platform using **Python, Django 4, MySQL**, and a managed **RAG** stack on **AWS (Bedrock** text embeddings and LLM, **OpenSearch** vector search).
- Built end to end retrieval and prompt pipelines that scope historical tickets by client and queue, perform vector similarity search, and generate draft ticket fields while meeting a **2.5s P95** end to end latency target.

Adobe Inc.

Bengaluru, India

Software Development Engineer

Jul 2022 - Jun 2024

- Developed and optimized **Java** backend services in a modular service architecture, improving request handling and server-rendered performance and increasing **Lighthouse Performance** scores by 30% across core user flows.
- Implemented headless content delivery by exposing structured content and metadata via **REST** and **GraphQL** APIs, enabling analytics and personalization integrations and reducing manual integration effort by 80%.
- Built a reproducible CI/CD pipeline with **GitLab CI + Maven**, adding **JUnit** automated tests, **SonarQube** quality gates, and **Dockerized** build environments to reduce configuration drift and improve release cadence by 35%.
- Implemented request-level observability using **structured logs**, **correlation IDs**, and **latency/error metrics**, adding production dashboards and alerts that reduced incident triage time by 30% through root-cause isolation.

PROJECTS

- **ContainrLab**, Browser-based Docker lab platform with real-time terminals, automated grading, and an AI lab assistant for guided hints; built with **Next.js + FastAPI + WebSockets** and **Docker-in-Docker** for isolated per-session containers; deployed on **AWS(ECS/Fargate, Auto Scaling, Route 53, ACM)** with **CI/CD**. [GitHub](#)
- **CloudArena**, Modular **AWS** security-exercise platform built with **FastAPI + Celery/Redis** and **Terraform** to provision sandbox environments, run Stratus-style simulations, and generate **MITRE ATT&CK** mapped findings with remediation reports using **Gemini**. [GitHub](#)

EDUCATION

University of Colorado Boulder

Boulder, CO, USA

Master of Science in Computer Science (GPA: 3.97/4.00)

Aug 2024 - May 2026

Vellore Institute of Technology

Vellore, TN, India

Bachelor of Technology in Information Technology (GPA: 8.7/10.0)

Jul 2018 - May 2022
